Visco Senfoni

(Ergonomic Orthopedic
Medical Bed)

Pocket Spring Mattress

Cellpur Visco Sponge Technology

Tencel fibers integrated into Cellpur as particles can absorb moisture up to 70% of its weight. This moisture is temporarily retained in the particles and is not released into the environment during that time.

After the end of use, the stored moisture is quickly released again. Cellpur immediately becomes ready to reabsorb moisture.

Pests such as dust mites (mite) need moisture to live. Cellpur eliminates this basic life requirement for them.

SOFT SURFACE (VISCO DIRECTION)

Visco Symphony Pocket Spring Mattress is a bed with pressure reducing feature with visco layer used on the upper surface. Protects the ergonomic structure of the body with downy sponge and extra sponge filling.

Visco is a special material that can adjust itself according to the weight and shape of the body thanks to its unique structure and returns to its original state when the pressure on it is lifted. It relaxes blood circulation, improves sleep quality. Reduces unwanted rotational movements during sleep. It allows you to wake up rested and start the day in a fit state. It is extremely effective in relieving lower back, neck and back pain.

HARD SURFACE

Visco Symphony Pocket Spring Mattress bottom protects the ergonomic structure of the body with feather sponge and extra sponge material.

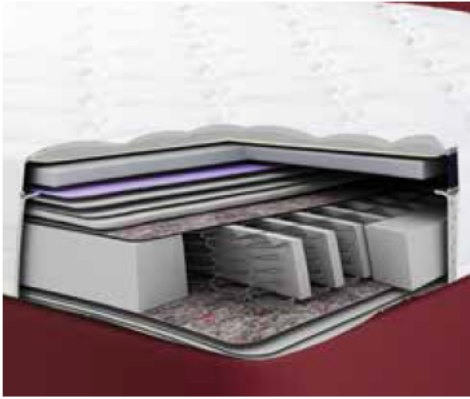

It is designed for two-way use.

SOFT SURFACE (VISCO DIRECTION)

With the cotton wadding located in the summer cottage, it provides you with cali-wire and unique sleeping comfort like spring weather in the summer heat. In the winter part, thanks to the dense wool wadding, it provides uninterrupted sleep without lowering your body temperature.

The bonnet spring system is a widely used system in the world. Coil springs are manufactured from high carbon steel wire and maintain their quality for years without deforming by increasing their durability with heat treatment.

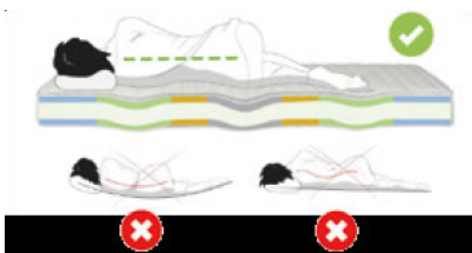

A sponge support system has been used between the springs, which ensures the ideal stiffness and the Decoupling of the spring system for many years.

VISCO SPONGE TECHNOLOGY

Viscolex technology, sensitive to body temperature and pressure, relaxes blood circulation. It reduces the pressure on November 1, 2019 on muscles and nerves. It helps to prevent the formation of head, neck, shoulder, waist, hip and sciatica pains with reduced pressure.

Visco Jumbo is a bearing with a pressure reducing feature with a visco elastic layer used on its upper surface.

This material, produced with open cell technology, moves sensitively to heat and pressure when you lie on the bed, and the movement lasts until the bed takes the exact shape of your body.

Effective air circulation is ensured thanks to the open-cell structure of the viscoelastic material and the special profile cutting used in the support sponge.

ASYA BED

Asia offers unique comfort with its extra plump appearance.

It provides a healthy sleeping environment with cotton and bamboo fibers in its yarns. Bamboo fibers quickly evaporate moisture from perspiration.

It is ecological.

Thanks to the flexibility created in the production of the fabric, it helps the continuity of blood flow in the capillaries during sleep.

The Asian Bed, which helps to recover the energy lost throughout the day with a Viscose Knitted Fabric, provides the air trasphere with a downy extra sponge and Thermobond technology on both surfaces. Ergonomic soft orthopedic feature is provided with hygienic rebound felt that distributes the pressure applied to the bed evenly and 3cm 28D and 3 cm downy sponge used on both surfaces.

The Asian Bed, which is produced to achieve the best sleep, offers you the necessary comfort to wake up energetically to the new day.

DEFNE BED

With the cotton wadding located in the summer cottage, it provides you with high quality and unique sleeping comfort, such as spring weather, in the summer heat.

In the winter part, thanks to the dense wool wadding, it provides uninterrupted sleep without lowering your body temperature.

The bonnet spring system is a widely used system in the world. Coil springs are manufactured from high carbon steel wire and maintain their quality for years without de-forming by increasing their durability with heat treatment.

A sponge support system has been used between the springs, which ensures the ideal stiffness and Deceleration of the spring system for years.
